Matt Kenseth Jeffrey Spaulding 2009-01-15 In a sport known for its brash personalities, risk-takers, and speed demons, Matt Kenseth is something of an oddity. He is the perfect illustration of the truism that "Slow and steady in the race." Known as a conservative driver who plays clean, drives patiently, and slowly but relentlessly moves to the front of the pack, Kenseth is routinely in the Top 15 race finishers and near the top of the NASCAR Cup series point totals, even though he wins few races outright. In fact, in 2003 he earned the Winston Cup Championship even though he won only one race that season. Though a quiet, steady, unassuming presence on and off the track, he has had his share of dust-ups with leading NASCAR drivers like Tony Stewart, Jeff Gordon, Carl Edwards, and Kevin Harvick. Quiet and conservative, but no push over, Kenseth prefers to prove his mettle on the track.

Managing Innovation and Change Sven B. Lundstedt 2013-03-14 Technological innovations, as well as the social innovations needed to provide adequate support systems for them, are among the important foundations for economic and industrial growth in the world today. Consequently, the discussions in this important volume of the emerg ing "sociotechnical" trends in various industries around the world are highly instructive and timely. We can learn much of value from oth ers around the world who are facing similar problems of economic and industrial development. Sociotechnical innovation requires a global set ting to be fully understood and appreciated because so much new eco nomic activity that serves the economy of the United States, as well as the economies of other countries, is found in other parts of the world including not only manufacturing innovations, but innovations in the service industries. For all of our economic self-interests, we need to view innovation globally. Sociotechnical innovation is linked with the successful development of cutting edge technologies, such as ultra large-scale integrated elec tronic systems, new larger computers, the "myria-process" systems in computing architecture that use thousands of processors, new biochem ical solutions in high-cost feedstock, applications of genetic engineer ing to crop improvement, and biotechnological improvements in the pharmaceutical industries. There are also developments in the materi als field: new fiber-reinforced plastics, rapid solidification technologies, new polymers and ceramics. And there are advances in air transport technologies that may replace current technologies [1].

Japanese Manufacturing Investment in Europe Roger Strange 2002-09-11 Japanese manufacturing investment in the European Community has grown dramatically over the last twenty years. At first, instances of investment were few, concentrated in a small number of industrial sectors. But since the mid-1980's there has been a surge of investment in a much wider range of industries. This volume details the growth of Japanese manufacturing investment in Europe in fourteen industrial sectors. The impact of Japanese competition and direct investment on European industries is considered in the context of the emergence of the three major trading blocs: the United States, Japan and the EC. Roger Strange concludes by making important policy recommendations, and arguing for the need for a new theoretical framework for assessing the political economy of foreign direct investment.

U.S. Global Competitiveness 1987

Training and the Private Sector Lisa M. Lynch 2007-12-01 How can today's workforce keep pace with an increasingly competitive global economy? As new technologies rapidly transform the workplace, employee requirements are changing and workers must adapt to different working conditions. This volume compares new evidence on the returns from worker training in the United States, Germany, France, Britain, Japan, Norway, and the Netherlands. The authors focus on Germany's widespread, formal apprenticeship programs; the U.S. system of learning-by-doing; Japan's low employee turnover and extensive company training; and Britain's government-led and school-based training schemes. The evidence shows that, overall, training in the workplace is more effective than training in schools. Moreover, even when U.S. firms spend as much on training as other countries do, their employees may still be less skilled than workers in Europe or Japan. Training and the Private Sector points to training programs in Germany, Japan, and other developed countries as models for creating a workforce in the United States that can compete more successfully in today's economy.

THAT SUCKED Ashley Hawn's vampire existence has been anything but calm. Turned for the sole purpose of raising a long-dead warlock from the grave, Ashley has spent her new life fighting against those who would use her. Now the warlock is back, and Ashley finds herself connected to him in every way possible. She must work alongside her friends to stop him from enslaving the entire human population. Meanwhile, the men in her life continue to show her romantic inclinations.
