Semantic Structure in English Jim Feist 2016-09-07 Syntax puts our meaning ("semantics") into sentences, and phonology puts the sentences into the sounds that we hear and there must, surely, be a structure in the meaning that is expressed in the syntax and phonology. Some writers use the phrase "semantic structure", but are referring to conceptual structure; since we can express our conceptual thought in many different linguistic ways, we cannot equate conceptual and semantic structures. The research reported in this book shows semantic structure to be in part hierarchic, fitting the syntax in which it is expressed, and partly a network, fitting the nature of the mind, from which it springs. It is complex enough to provide for the emotive and imaginative dimensions of language, and for shifts of standard meanings in context, and the "rules" that control them. Showing the full structure of English semantics requires attention to many currently topical issues, and since the underlying theory is fresh, there are fresh implications for them. The most important of those issues is information structure, which is given full treatment, showing its overall structure, and its relation to semantics and the whole grammar of English.

<u>Radical Construction Grammar</u> William Croft 2001 This book is based on the results of research in language typology, and motivated by the need for a theory to explain them. The essence of the approach is (a) that almost all aspects of grammatical structure are language specific, and (b) that language universals are to be found in conceptual structure and in the mapping of conceptual structure on to linguistic form. It proposes intimate links between syntactic and semantic structures, and argues that the basic elements of any language are not syntactic but syntactic-semantic 'Gestalts'. Professor Croft puts forward a new approach to syntactic representation and a new model of how language and languages work. He covers a wide range of syntactic phenomena, illustrating these with examples that show the varied grammatical structures of the world's languages. The book will be accessible all linguists at graduate level and beyond.

To be or not to be a Word Iraide Ibarretxe-Antuñano 2014-10-02 This book discusses the nature and definition of what a word is in Linguistics. This is not an easy task since the term subsumes a wide range of phenomena explored from an even wider array of perspectives. Although words are the most accessible linguistic units from the speaker's introspection viewpoint, they are, at the same time, an incredibly elusive reality for the linguist. Issues such as their definition, theoretical status, limits, characteristics, and psycholinguistic reality are still controversial and open for debate. This book offers an up-to-date overview of the latest discussions on the nature of word in Modern Linguistics. It gathers together under a single collective volume different views of what a word is from a wide range of diverse methodological and theoretical linguistic frameworks, such as phonological theory, linguistic typology, lexical generative morphology, generative syntax, cognitive grammar, and construction grammar. Despite their different backgrounds, all these papers are geared towards the same goal: to offer a detailed account of what a word is in their respective fields. All in all, this collection of papers offers different perspectives that will contribute to provide some answers to the myriad of questions that a simple phrase such as to be or not to be a Word brings to the fore.

Structure and Function: From clause to discourse and beyond Christopher Butler 2003 Volume one of a two volume set outlining and comparing three approaches to the study of language labelled 'structural-functionalist': functional grammar (FG); role and reference grammar (RRG); and systemic functional grammar (SFG).

Romance Perspectives on Construction Grammar Hans C. Boas 2014-08-15 The chapters in this book show how the different flavors of Construction Grammar provide illuminating insights into the syntax, semantics, pragmatics and discourse-functional properties of specific phenomena in Romance languages such as (Castilian) Spanish, French, Romanian, and Latin from a synchronic as well as a diachronic viewpoint. The phenomena surveyed include the role of constructional meanings in novel verb-noun compounds in Spanish, the relevance of lexicalization for a constructionist analysis of complex prepositions in French, the complementariness of fragments, patterns and constructions as theoretical and explanatory constructs in verb complementation in French, Latin, and Spanish, non-constituent coordination phenomena (e.g. Right Node Raising, Argument Cluster Coordination and Gapping) in Romanian, and variable type framing in Spanish constructions of directed motion in the light of Leonard Talmy's (2000) typological differences of lexicalization between satellite-framed and verb-framed languages.

Values Under Construction Steve Hood 2009-12-20 There was a time when a man's word was gold. The press of a hand and a promise given was all that was required to conduct business. Honor, integrity, courage, commitment, and family were more than just words on a page; it was how you lived and how you taught your children to live. A long time ago "a full day's work for a full day's pay" was the expectation not the exception. Somewhere over the course of time the values that were held as the standard of behavior have been forgotten. A generation who believed they had all the answers turned their backs on the values of their parents and set out to redefine how to act and how to live. The children of this generation now are reaping the harvest of the wild oats sewn through the sixties, seventies and eighties. What do we do now and how do we turn this around? Values Under Construction takes us back in time to revisit the values learned from the "Greatest Generation." Steven Hood takes us through the visual images of a construction site as he explains the process of building values into your life. From the word of God and from examples in the lives of those he has known, each step of the construction process builds on the last, moving us forward to the completed structure that God would have us to be. Written from the heart of a father to his adult sons, Values Under Construction gives a clear and concise definition of each value as found through the Word of God and then challenges each of us to live out that value in all parts of our lives. It is a book that every dad will want to give to his son as he sends him out into the world.

Spanish Grammar the Easy Way Boris Corredor 2004 This brand new addition to Barron s Easy Way series focuses on the fundamentals of correct grammatical construction and word usage in Spanish. Topics include sentence structure, all parts of speech, including regular and irregular verb conjugations, punctuation, correct writing style, and reading comprehension. This title can be used alone as a self teacher, as a supplement to standard Spanish textbooks, or as a companion text to Barron s Spanish the Easy Way, 4th Edition (0-7641-1974-5), which emphasizes oral proficiency in Spanish. Barron s Easy Way books focus on both practical and academic topics, presenting fundamental subject matter in clear, understandable language. Equally popular as self-teaching manuals and supplementary texts for classroom use, they are written to help students improve their grades and review subject matter before tests. They are also useful for introducing general readers to a new career-related skill. Easy Way titles cover virtually all subjects that are taught on advanced high school and college-101 levels. Subject heads and key phrases are set in a second color.

<u>Constructional and Conceptual Composition</u> Ellen Kirsten Dodge 2010 Goldberg's (1995) recognition that, in addition to various word-level constructions, sentences also instantiate meaningful argument structure constructions enables a non-polysemy-based analysis of various verb 'alternations' (Levin 1993). In such an analysis, meaning variations associated with the use of the same verb in different argument realization patterns are analyzed as resulting from composition of the same verb meaning with different meaningful argument structure constructions. This compositional analysis raises some important semantic questions: Which specific elements of verb and argument structure construction meanings motivate their composition? And what is the precise nature of the meaning that results from this composition? I argue that to answer these questions, it is essential that we look more closely at the underlying conceptual systems utilized by these constructions. In this dissertation, I examine a set of simple single clause sentence examples which describe a variety of basic experiences involving motion, change of location, action, force, causation, and affectedness. One key assumption that the Neural Theory of Language (NTL) makes about language understanding concerns simulation semantics, the idea that the neural circuitry we use to understand descriptions of experiences is closely similar to that which is activated by the experiences themselves (Feldman 2006). Accordingly, I use linguistic, neuroscientific, and other forms of evidence to define a lattice of interconnected schemas that represent schematic structures and interrelations associated with the types of experiences described in these examples, and use these schemas in the meaning representations of the verb and argument structure constructions instantiated in these examples. In addition, the grammar described in this dissertation includes various word-level, phrasal and clause-level constructions, along with schemas to represent their meanings, all of which are represented using the Embodied Construction Grammar (ECG) formalism (Bergen and Chang 2005, Feldman et al. 2010). Significantly, use of this formalism has made it possible to utilize many of the schemas and constructions in this grammar in a computational implementation of a compositional constructional analysis of sentence meaning. This implementation, called the Constructional Analyzer (Bryant 2008) determines the best-fitting interpretation of an utterance in context based on a consideration of syntactic, semantic, and contextually-specified constraints. The composed meanings of the constructions instantiated in this best fit interpretation serve as a semantic specification for the simulation of the event described by the utterance (simulation is not carried out as part of this implementation). Through simulation, the relatively schematic meanings specified by the constructions instantiated in a given utterance give rise to a much richer and fuller understanding of that utterance, via activation of additional conceptual structure related to an understander's experiences, beliefs, etc. The schemas and constructions that comprise the grammar discussed in this dissertation have many complex interrelations. One important benefit of using the ECG formalism is that computational implementations facilitate the development of an internally consistent, wide-coverage, complex grammar. In this respect, it is similar to other unification grammars, such as HPSG (Pollard and Sag 1994) and LFG (Dalrymple 2001). However, unlike these other grammars, ECG has a deep commitment to embodied semantics, and is consistent with the NTL theoretical framework. Moreover, as the schemas and constructions presented in this dissertation illustrate, this formalism makes possible the integrated expression of several important cognitive linguistic insights, including those related to recurrent schematic conceptual structure such as: (1) image schemas (Johnson 1987, Lakoff 1987) and frames (Fillmore 1982); (2) basic patterns of cognitive organization such as prototypes (Rosch 1975, 1978) and radial categories of A-S constructions (Lakoff 1987, Goldberg 1995), and; (3) different attention-related phenomena such as perspective and profiling (Talmy 1996; Langacker 1987, 1991). Together, the different elements described above enable the development of a grammar that supports compositional constructional analyses of a range of different sentence examples that instantiate various combinations of different verb and argument structure constructions. Significantly, these analyses capture the sometimes subtle similarities and differences in the event conceptualizations described by these examples. Moreover, this compositional account of sentence meaning also provides a compositional account of semantic roles that enable us to recognize a variety of cross-cutting generalizations that can be made about these roles.

The Oxford Handbook of Construction Grammar Thomas Hoffmann 2013-02-22 The last decade has seen a rise in popularity in construction-based approaches to grammar. The various approaches within the rubric 'construction grammar' all see language as a network of constructions-pairings of form and meaning. Construction Grammar, as a kind of cognitive linguistics, differs significantly from mainstream generative grammar as espoused by Chomsky and his followers. Advocates of

Construction Grammar see it as a psychologically plausible theory of human language. As such, it is capable of providing a principled account of language acquisition, language variation and language change. Research in Construction Grammar also includes multidisciplinary cognitive studies in psycholinguistics, neurolinguistics, and computational linguistics. The Oxford Handbook of Construction Grammar is the first authoritative reference work solely dedicated to Construction Grammar. Divided into five sections, the book will be an invaluable resource that students and scholars alike can turn to for a comprehensive account of current work on Construction Grammar, its theoretical foundations, and its applications to and relationship with other kinds of linguistic enquiry.

Defaults in Morphological Theory Nikolas Gisborne 2017-10-26 Chapters in this volume describe morphology using four different frameworks that have an architectural property in common: they all use defaults as a way of discovering and presenting systematicity in the least systematic component of grammar. These frameworks - Construction Morphology, Network Morphology, Paradigm-function Morphology, and Word Grammar - display key differences in how they constrain the use and scope of defaults, and in the morphological phenomena that they address. An introductory chapter presents an overview of defaults in linguistics and specifically in morphology. In subsequent chapters, key proponents of the four frameworks seek to answer questions about the role of defaults in the lexicon, including: Does a defaults-based account of language have implications for the architecture of the grammar, particularly the proposal that morphology is an autonomous component? How does a default differ from the canonical or prototypical in morphology? Do defaults have a psychological basis? And how do defaults help us understand language as a sign-based system that is flawed, where the one to one association of form and meaning breaks down in the morphology?

Gravel Roads Ken Skorseth 2000 The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.

On Information Structure, Meaning and Form Kerstin Schwabe 2007-03-08 This collection of articles offers a new and compelling perspective on the interface connecting syntax, phonology, semantics and pragmatics. At the core of this volume is the hypothesis that information structure represents the common interface of these grammatical components. Information structure is investigated here from different theoretical viewpoints yielding typologically relevant information and structural generalizations. In the volume's introductory chapter, the editors identify two central approaches to information structure: the formal and the interpretive view. The remainder of the book is organized accordingly. The first part examines information structure and grammar, concentrating on generalizations across languages. The second part investigates information structure and pragmatics, concentrating on clause structure and context. Through concrete analyses of topic, focus, and related phenomena across different languages, the contributors add new and convincing evidence to the research on information structure.

Austronesian Undressed David Gil 2020-10-15 Many Austronesian languages exhibit isolating word structure. This volume offers a series of investigations into these languages, which are found in an "isolating crescent" extending from Mainland Southeast Asia through the Indonesian archipelago and into western New Guinea. Some of the languages examined in this volume include Cham, Minangkabau, colloquial Malay/Indonesian and Javanese, Lio, Alorese, and Tetun Dili. The main purpose of this volume is to address the general question of how and why languages become isolating, by examination of a number of competing hypotheses. While some view morphological loss as a natural process, others argue that the development of isolating word structure is typically driven by language contact through various mechanisms such as creolization, metatypy, and Sprachbund effects. This volume should be of interest not only to Austronesianists and historians of Insular Southeast Asia, but also to grammarians, typologists, historical linguists, creolists, and specialists in language contact.

Testing Lecture Comprehension Through Listening-to-summarize Cloze Tasks Haiping Wang 2017-09-06 This book explores the effectiveness of listen-to-summarize tasks as a tool to assess lecture comprehension ability. It especially focuses on listen-to-summarize tasks that represent listeners' meaning building and the discourse construction of the lecture for listening assessment purposes. It discusses in depth the nature of lecture comprehension and introduces the approaches to assessing it. It also presents teachers' and students' perceptions of listen-to-summarize task demands and their respective implications. By observing interactions between test-takers' cognitive processes and the task itself, the book explores the effectiveness of these tasks. It also examines the discrepancy in cognitive processes between different language competence levels in detail, shedding light upon current research on lecture comprehension assessment and offering insights into listening comprehension instruction.
