Does Failing a Placement Exam Discourage Underprepared Students from Going to College? Paco Martorell 2013 About one-third of college students are required to take remedial courses to redress the lack of preparation for college-level coursework. Assignment to remediation is generally made on the basis of a placement test score, and in some states students are required to take a placement test prior to enrolling in college-level courses. In this type of setting, assignment to remediation may have the unintended effect of dissuading students from actually going to college. This is because remedial courses typically do not count towards a college degree, so remediation increases the cost of college by increasing the time required to complete a degree. Furthermore, being identified as in need of remediation could directly affect enrollment rates via stigma effects or by providing students with information about their unsuitability for college. This paper examines this issue empirically using administrative data from the state of Texas. Using regression discontinuity methods, we find that students whose placement exam scores would require them to be in remediation are no less likely to enroll in college than are those scoring just above the remediation placement cutoff. Appended are: (1) Distribution of Min (Math, Reading) Score; and (2) Average Max (Math, Reading) Score by Min (Math, Reading) Score. (Contains 5 figures, 7 tables and 23 footnotes.).

Do High-Stakes Placement Exams Predict College Success? Judith Scott-Clayton 2012 Community colleges are typically assumed to be nonselective, open-access institutions. Yet access to college-level courses at such institutions is far from guaranteed: the vast majority of two-year institutions administer high-stakes exams to entering students that determine their placement into either college-level or remedial education. Despite the stakes involved, there has been relatively little research investigating whether such exams are valid for their intended purpose, or whether other measures of preparedness might be equally or even more effective. This paper contributes to the literature by analyzing the predictive validity of one of the most commonly used assessments, using data on over 42,000 first-time entrants to a large, urban community college system. Using both traditional correlation coefficients as well as more useful decision-theoretic measures of placement accuracy and error rates, I find that placement exams are more predictive of

success in math than in English, and more predictive of who is likely to do well in college-level coursework than of who is likely to fail. Utilizing multiple measures to make placement decisions could reduce severe misplacements by about 15 percent without changing the remediation rate, or could reduce the remediation rate by 8 to 12 percentage points while maintaining or increasing success rates in college-level courses. Implications and limitations are discussed. (Contains 6 tables, 5 figures and 12 footnotes.).
