Repair and Rehabilitation of Dams James E. McDonald 1999 This study was conducted to identify methods that have been used in the repair and rehabilitation of concrete dams. Information was obtained through literary searches, discussions with project personnel, and visits to project sites. Each case history includes a background of the project, the deficiency that necessitated repair or rehabilitation, and descriptions of materials and methods used in the repair or rehabilitation. When available, the cost of the repair project and the performance of the repair to date have been included. Case histories included in this report cover a range of deficiencies in concrete structures, including cracking, spalling, erosion, leakage, inadequate PMF capacity, expansion resulting from alkali-aggregate reaction, instability, and insufficient storage capacity.

Ancient Light John Banville 2012-10-02 The Man Booker Prize-winning author of *The Sea* gives us a brilliant, profoundly moving new novel about an actor in the twilight of his life and his career: a meditation on love and loss, and on the inscrutable immediacy of the past in our present lives. Is there any difference between memory and invention? That is the question that fuels this stunning novel, written with the depth of character, the clarifying lyricism and the sly humor that have marked all of John Banville's extraordinary works. And it is the question that haunts Alexander Cleave, an actor in the twilight of his career and of his life, as he plumbs the memories of his first—and perhaps only—love (he, fifteen years old, the woman more than twice his age, the mother of his best friend; the situation impossible, thrilling, devouring and finally devastating) . . . and of his daughter, lost to a kind of madness of mind and heart that Cleave can only fail to understand. When his dormant acting career is suddenly, inexplicably revived with a movie role portraying a man who may not be who he says

he is, his young leading lady—famous and fragile—unwittingly gives him the opportunity to see with aching clarity the “chasm that yawns between the doing of a thing and the recollection of what was done.” *Ancient Light* is a profoundly moving meditation on love and loss, on the inscrutable immediacy of the past in our present lives, on how invention shapes memory and memory shapes the man. It is a book of spellbinding power and pathos from one of the greatest masters of prose at work today. This eBook edition includes a Reading Group Guide.

Water Services Management David Stephenson 2005-03-01 Water services include water supply, sewerage and stormwater drainage. The facilities needed for these services are pipelines, reservoirs and treatment works; but the service goes beyond the infrastructure. It includes economics, billing, and business management. Although these services exist in every city, being advanced by the growing use of automation and information technology, costs are also increasing without many consumers seeing increased benefits. Customer service is therefore becoming important to the industry. Water Services Management is intended to educate engineers to manage and improve water services, rather than simply designing and constructing treatment works and distribution systems. The text covers water supply and drainage from the hydraulic and economic points of view, and while design and construction practices are reviewed, the focus of the book is on improving existing systems to turn the emerging industry into an attractive business. Topics covered include: Potable water supply, sewerage and stormwater drainage. Hydraulic management: storage, peak flow attenuation and pumping. Water quality: standards, pollution control and treatment. Infrastructure management: rehabilitation, reconstruction, upgrading and maintenance. Economic efficiency: asset management, privatization, and risk analysis. Improving economic viability

via efficient use of energy and construction project management. Characteristics encountered in developing countries are also considered, including: Low cost sanitation, water supply standards and off-grid energy sources. Capacity building and appropriate technologies. Financing, operation and benchmarking.

Time's Convert Deborah Harkness 2018-09-18 From the #1 New York Times bestselling author of *A Discovery of Witches*—look for the hit TV series “*A Discovery of Witches*,” streaming on AMC Plus, Sundance Now and Shudder. Season 2 premieres January 9, 2021! What does it truly take to become a vampire? On the battlefields of the American Revolution, Matthew de Clermont meets Marcus MacNeil, a young surgeon from Massachusetts, during a moment of political awakening when it seems that the world is on the brink of a brighter future. When Matthew offers him a chance at immortality and a new life free from the restraints of his puritanical upbringing, Marcus seizes the opportunity to become a vampire. But his transformation is not an easy one and the ancient traditions and responsibilities of the de Clermont family clash with Marcus's deeply held beliefs in liberty, equality, and brotherhood. Fast-forward to contemporary Paris, where Phoebe Taylor--the young employee at Sotheby's whom Marcus has fallen for--is about to embark on her own journey to immortality. Though the modernized version of the process at first seems uncomplicated, the couple discovers that the challenges facing a human who wishes to be a vampire are no less formidable than they were in the eighteenth century. The shadows that Marcus believed he'd escaped centuries ago may return to haunt them both--forever. A passionate love story and a fascinating exploration of the power of tradition and the possibilities not just for change but for revolution, *Time's Convert*, the fourth books in the All Souls Series channels the supernatural world-building and slow-burning romance that made the previous books instant bestsellers to illuminate a new and vital moment in history, and a love affair that will bridge centuries.
