The Feminization of Agriculture? Carmen Diana Deere 2005 The main trends associated with the economic crisis, neoliberal restructuring, and the growth of rural poverty rates in Latin America include a continued diversification of rural household income-generating strategies, an increase in the number of household members seeking off-farm employment, and the increased participation of rural women as both own-account and wage workers in the agricultural as well as non-agricultural sectors. While methodological problems persist in analysing changes in rural women's work over time, the dominant trend in the region over the past several decades has been towards the feminization of agriculture. The growth in women's agricultural wage employment has been concentrated in the non-traditional agro-export sector favoured under neoliberalism: specifically, in the production and packing of fresh vegetables, fruits and flowers for Northern markets, what now constitutes Latin America's leading agricultural export rubric. In many countries women and children make up half or more of the field labour for these crops, while women constitute the vast majority of the workers in the packing houses geared to the export market. Nonetheless, the characteristics of this employment, principally its temporary, seasonal and precarious nature, have made it difficult to capture quantitatively in national censuses and household surveys. The essay analyses the role of gender-segmented labour markets in increasing the demand for female labour, as well as the significance of women's increased participation in wage labour for female empowerment. There is also evidence, stronger for some countries than others, of a feminization of smallholder production, as growing numbers of rural women become the principal farmers-that is, own-account workers in agriculture. This phenomenon is associated with an increase in the proportion of rural female household heads; male absence from the farm, in turn related to growing male migration and/or employment in off-farm pursuits; and the decreased viability of peasant farming under neoliberalism. There is little question that the principal factor driving these trends is the need for

rural households to diversify their livelihoods. The combination of growing land shortage, economic crises and unfavourable policies for domestic agriculture has meant that peasant households can no longer sustain themselves on the basis of agricultural production alone. The response to the crisis of peasant agriculture has been an increase in the number of rural household members pursuing off-farm activities. Whether these are male, female, or include both genders, depends on a myriad of factors, with household composition and the stage of the domestic cycle, and the dynamism and gendered nature of local, regional and international labour markets, being among the most important.

Visualization, Modeling, and Graphics for Engineering Design Dennis K. Lieu 2008-02-15 A new book for a new generation of engineering professionals, Visualization, Modeling, and Graphics for Engineering Design was written from the ground up to take a brand-new approach to graphic communication within the context of engineering design and creativity. With a blend of modern and traditional topics, this text recognizes how computer modeling techniques have changed the engineering design process. From this new perspective, the text is able to focus on the evolved design process, including the critical phases of creative thinking, product ideation, and advanced analysis techniques. Focusing on design and design communication rather than drafting

techniques and standards, it goes beyond the what to explain the why of engineering graphics. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Peasant Society and Marxist Intellectuals in China Kamal Sheel 2016-04-03 Whereas most writing on the Communist Revolution in China has concentrated on the influence of intellectual leaders, this book examines the role of peasants in the upheaval, viewing them not as a malleable mass but as a dynamic social force interacting with the radical intelligentsia. Focusing on the Xinjiang region, Kamal Sheel traces the historical roots of the early twentieth-century agrarian crisis that led to a large-scale revolution in the late 1920s, one of the most successful peasant movements organized by the Chinese Communists. A fresh analysis emerges of the remarkable Marxist intellectual Fang Zhimin, who used his deeply entrenched rural connections to organize the movement through a creative synthesis of traditional folk concepts with modern Marxist thought. This history begins with the impact of the Taiping Rebellion and proceeds to document the rapid disintegration of the small peasant economy under the pressures of world economics, a "state in crisis," and a qualitatively different landed upper class. It discusses exploitation, protest, and rural uprisings in the context of the "crisis of paternalism," marked by a progressive deterioration in the social relationships in rural areas. Integrating this investigation of rural upheaval with recent social science theories on peasant movements, the study ultimately explores the growth of the Xinjiang revolutionary movement. Originally

The Gendered Impacts of Liberalization Shahra Razavi 2009-01-13 In the last two decades public policies have reflected a drive for accelerated global economic integration ("globalization"), associated with greater economic liberalization. The outcomes have been largely disappointing, even in the estimate of their designers. Rural livelihoods have become more insecure, and the expected growth has rarely materialized. Insecurity is also etched into the growth of informal economies across the world. Yet the economic policy agenda that has been so adverse to many people around the world has also provided new opportunities to some social groups, including some low-income women. In response to widespread discontent with the liberalization agenda, more attention is now being given to social policies and governance issues, viewed as necessary if globalization is to be "tamed" and "embedded". The contributors to this volume address key issues and questions such as whether states have the capacity to remedy the social distress unleashed by liberalization in the absence of any major revision of their macroeconomic policies and whether the proposed social policy reforms can redress gender-based inequalities in access to resources and power.

Engineering Design Communication Shawna D. Lockhart 2012 Engineering Design Communication: Conveying Design Through Graphics, Second Edition, offers a new approach to the traditional engineering graphics course. This text is designed for students who are learning to use graphics, especially 3D modeling, as a tool for engineering design. The text takes a streamlined approach, emphasizing the how and why of 2D sketching, reading and visualizing objects from 2D views, and creating 3D models that will function as the design database. Case studies and industry examples illustrate ways that these skills support practicing engineers in their work. Students will learn to develop models that capture the design intent for a product or system, update properly when changes are made, and serve the many purposes associated with their role as the design database. Practical tips and step-by-step instruction support the hands-on nature of the course. The text is designed to be used with any modeling package, but it can be bundled with the SolidWorks Student Design Kit (and the authors point out specific SolidWorks tutorials that coordinate well with the chapters).. A reverse engineering project is continued through the text.
