Free Culture Lawrence Lessig
2016-07-30 Lawrence Lessig, “the most important thinker on intellectual property in the Internet era”, masterfully argues that never before in human history has the power to control creative progress been so concentrated in the hands of the powerful few, the so-called Big Media. Never before have the cultural powers- that-be been able to exert such control over what we can and can’t do with the culture around us. Our society defends free markets and free speech; why then does it permit such top-down control? To lose our long tradition of free culture, Lawrence Lessig shows us, is to lose our freedom to create, our freedom to build, and, ultimately, our freedom to imagine.

Black Holes and Time Warps Kip S. Thorne 1994 Examines such phenomena as black holes, wormholes, singularities, gravitational waves, and time machines, exploring the fundamental principles that control the universe.

Burning Conscience: The Case Of The Hiroshima Pilot Claude Eatherly
Claude Eatherly 2015-11-06 A collection of correspondence between Claude Eatherly, a former air force pilot, and Günther Anders, a German philosopher. Eatherly was the pilot who gave the all-clear for the dropping of the atomic bomb on Hiroshima: an action the implications of which he had not known at the time. Returning from the mission and learning of the devastating impact of the atomic bomb Eatherly was unable to calmly accept his role. Though he was treated as a hero in the press, Eatherly was morally distraught over his actions and felt that he could not silently accept the accolades. Over the course of some 71 letters Anders and Eatherly struggled with the problem of taking moral responsibility in a time when ethics were the last thing that most people seemed to want to discuss. Part of what fascinated Anders about Eatherly – and prompted the former to contact the latter – was precisely this way

in which Eatherly sought to take responsibility for something which he easily could have ignored as having been a matter of "just following orders." *Burning Conscience* is a fascinating and troubling book – not simply because it provides a first-hand account of an oft untold moral story in the aftermath of World War II, but because the matters being discussed by Anders and Eatherly are as important today as they were during the lives of the correspondents.– Lib. Black Skin, White Masks Frantz Fanon
2017-05-09 *Black Skin, White Masks* is a classic, devastating account of the dehumanising effects of colonisation experienced by black subjects living in a white world. First published in English in 1967, this book provides an unsurpassed study of the psychology of racism using scientific analysis and poetic grace. Franz Fanon identifies a devastating pathology at the heart of Western culture, a denial of difference, that persists to this day. A major influence on civil rights, anti-colonial, and black consciousness movements around the world, his writings speak to all who continue the struggle for political and cultural liberation. With an introduction by Paul Gilroy, author of *There Ain't No Black in the Union Jack*.

Shutting Out the Sun Michael Zielenziger
2009-05-06 The world's second-wealthiest country, Japan once seemed poised to overtake America. But its failure to recover from the economic collapse of the early 1990s was unprecedented, and today it confronts an array of disturbing social trends. Japan has the highest suicide rate and lowest birthrate of all industrialized countries, and a rising incidence of untreated cases of depression. Equally as troubling are the more than one million young men who shut themselves in their

rooms, withdrawing from society, and the growing numbers of "parasite singles," the name given to single women who refuse to leave home, marry, or bear children. In *Shutting Out the Sun*, Michael Zielenziger argues that Japan's rigid, tradition-steeped society, its aversion to change, and its distrust of individuality and the expression of self are stifling economic revival, political reform, and social evolution. Giving a human face to the country's malaise, Zielenziger explains how these constraints have driven intelligent, creative young men to become modern-day hermits. At the same time, young women, better educated than their mothers and earning high salaries, are rejecting the traditional path to marriage and motherhood, preferring to spend their money on luxury goods and travel. Smart, unconventional, and politically controversial, *Shutting Out the Sun* is a bold explanation of Japan's stagnation and its implications for the rest of the world.

Virtual Justice Greg Lastowka
2010-10-26 Tens of millions of people today are living part of their life in a virtual world. In places like *World of Warcraft*, *Second Life*, and *Free Realms*, people are making friends, building communities, creating art, and making real money. Business is booming on the virtual frontier, as billions of dollars are paid in exchange for pixels on screens. But sometimes things go wrong. Virtual criminals defraud online communities in pursuit of real-world profits. People feel cheated when their avatars lose virtual property to wrongdoers. Increasingly, they turn to legal systems for solutions. But when your avatar has been robbed, what law is there to assist you? In *Virtual*

Justice, Greg Lastowka illustrates the real legal dilemmas posed by virtual worlds. Presenting the most recent lawsuits and controversies, he explains how governments are responding to the chaos on the cyberspace frontier. After an engaging overview of the history and business models of today's virtual worlds, he explores how laws of property, jurisdiction, crime, and copyright are being adapted to pave the path of virtual law. Virtual worlds are becoming more important to society with each passing year. This pioneering study will be an invaluable guide to scholars of online communities for years to come.

Digital Content Creation Rae Earnshaw 2012-12-06 The very word "digital" has acquired a status that far exceeds its humble dictionary definition. Even the prefix digital,

when associated with familiar sectors such as radio, television, photography and telecommunications, has reinvented these industries, and provided a unique opportunity to refresh them with new start-up companies, equipment, personnel, training and working practices - all of which are vital to modern national and international economies. The last century was a period in which new media stimulated new job opportunities, and in many cases created totally new sectors: video competed with film, CDs transformed LPs, and computer graphics threatened traditional graphic design sectors. Today, even the need for a physical medium is in question. The virtual digital domain allows the capture, processing, transmission, storage, retrieval and display of text, images, audio and animation without familiar materials such as paper, celluloid, magnetic tape and plastic. But moving from these media to the digital domain introduces all sorts of problems, such as the conversion of analog archives, multimedia databases, content-based retrieval and the design of new content that exploits the benefits offered by digital systems. It is this issue of digital content creation that we address in this book. Authors from around the world were invited to comment on different aspects of digital content creation, and their contributions form the 23 chapters of this volume.

Smart Home Hacks Gordon Meyer
2004-10-25 So much of what is commonplace today was once considered impossible, or at least wishful thinking. Laser beams in the operating room, cars with built-in guidance systems, cell phones with email access. There's just no getting around the fact that technology always has, and always will be, very cool. But technology isn't only cool;

it's also very smart. That's why one of the hottest technological trends nowadays is the creation of smart homes. At an increasing rate, people are turning their homes into state-of-the-art machines, complete with more switches, sensors, and actuators than you can shake a stick at. Whether you want to equip your home with motion detectors for added security, install computer-controlled lights for optimum convenience, or even mount an in-home web cam or two purely for entertainment, the world is now your oyster. Ah, but like anything highly technical, creating a smart home is typically easier said than done. Thankfully, Smart Home Hacks takes the guesswork out of the process. Through a seemingly unending array of valuable tips, tools, and techniques, Smart Home Hacks explains in clear detail how to use Mac, Windows, or Linux to achieve the automated home of your dreams. In no time, you'll learn how to turn a loose collection of sensors and switches into a well-automated and well-functioning home no matter what your technical level may be. Smart Home Hacks covers a litany of stand-alone and integrated smart home solutions designed to enhance safety, comfort, and convenience in new and existing homes. Kitchens, bedrooms, home offices, living rooms, and even bathrooms are all candidates for smart automation and therefore are all addressed in Smart Home Hacks. Mapping Reality Geoff King 1996-04-12 An original and wide-ranging study of the mappings used to impose meaning on the world, *Mapping Reality* argues that maps create rather than merely represent the ground on which they rest. Distinctions between map and territory questioned by some theorists of the postmodern have always been arbitrary. From the history of cartography to the mappings of culture, sexuality and nation, Geoff King draws on an extensive range of materials, including mappings imposed in the colonial settlement of America, the Cold War, Vietnam and the events since the collapse of the Soviet bloc. He argues for a deconstruction of the opposition between map and territory to allow dominant mappings to be challenged, their contours redrawn and new grids imposed.

How We Became Posthuman N. Katherine Hayles 1999-02-15 In this age of DNA computers and artificial intelligence, information is becoming disembodied even as the "bodies" that once carried it vanish into virtuality. While some marvel at these changes, envisioning consciousness downloaded into a computer or humans "beamed" Star Trek-style, others view them with horror, seeing monsters brooding in the machines. In *How We Became Posthuman*, N. Katherine Hayles separates hype from fact, investigating the fate of embodiment in an information age. Hayles relates

three interwoven stories: how information lost its body, that is, how it came to be conceptualized as an entity separate from the material forms that carry it; the cultural and technological construction of the cyborg; and the dismantling of the liberal humanist "subject" in cybernetic discourse, along with the emergence of the "posthuman." Ranging widely across the history of technology, cultural studies, and literary criticism, Hayles shows what had to be erased, forgotten, and elided to conceive of information as a disembodied entity. Thus she moves from the post-World War II Macy Conferences on cybernetics to the 1952 novel *Limbo* by cybernetics aficionado Bernard Wolfe; from the concept of self-making to Philip K. Dick's literary explorations of hallucination and reality; and from artificial life to postmodern novels exploring the implications of seeing humans as cybernetic systems. Although becoming posthuman can be nightmarish, Hayles shows how it can also be liberating. From the birth of cybernetics to artificial life, *How We Became Posthuman* provides an indispensable account of how we arrived in our virtual age, and of where we might go from here.
