Massey Ferguson 100 Series In Detail Michael Thorne 2018-02-06 Following his well-received books in this ‘In Detail’ series on the Ferguson TE20 and the Massey Ferguson 35 & 65 models, author Michael Thorne turns his attention to the outstandingly successful and well-loved 100 Series of tractors. Of the 100 range, the most popular was and remains the 135. Half a million 135s were built at Massey Ferguson’s factory in Coventry alone, with production overseas on top of this figure. Another big success was the larger, more powerful 165, with nearly 200,000 sold. This model, like the 135, is among the most popular and sought-after classic tractors today, although many 135s and 165s are still in active use around the world, in spite of their age. The 100 range included a great number of other models, and in addition to the 135 and 165, which are given in-depth treatment here, important models described in detail are the 130, 148 Super-Spec, 168, 175, 185 and 188 Super-Spec. There is an extensive chapter on the implements available for the range, and another on conversions. Featuring 290 illustrations including detailed specially-commissioned colour photography of outstanding examples of 100 Series tractors, Massey Ferguson 100 Series In Detail offers an unrivaled store of knowledge for the owners and enthusiasts who care passionately about these tractors, and serves as a tribute to the people who made them.

From Temple to Museum Salila Kulshreshtha 2017-10-05 Religious icons have been a contested terrain across the world. Their implications and understanding travel further than the artistic or the aesthetic and inform contemporary preoccupations.This book traces the lives of religious sculptures beyond the moment of their creation. It lays bare their purpose and evolution by contextualising them in their original architectural or ritual setting while also following their displacement. The work examines how these images may have moved during different spates of temple renovation and acquired new identities by being relocated either within sacred precincts or in private collections and museums, art markets or even desecrated and lost. The book highlights contentious issues in Indian archaeology such as renegotiating identities of religious images, reuse and sharing of sacred space by adherents of different faiths, rebuilding of temples and consequent reinvention of these sites. The author also engages with postcolonial debates surrounding history writing and knowledge creation in British India and how colonial archaeology, archival practices, official surveys and institutionalisation of museums has influenced the current understanding of religion, sacred space and religious icons. In doing so it bridges the historiographical divide between the ancient and the modern as well as socio-religious practices and their institutional memory and preservation. Drawn from a wide-ranging and interdisciplinary study of religious sculptures, classical texts, colonial archival records, British travelogues, official correspondences and fieldwork, the book will interest scholars and researchers of history, archaeology, religion, art history, museums studies, South Asian studies and Buddhist studies.

Compact Utility Tractors Dennis David 2013-06-01 Compact Utility Tractors, or CUTs, are cute little cutters! As farming became more refined so did the needs of tractors. The answer was a smaller, more maneuverable and fuel-efficient tractor with a variety of implements and attachments. With this focus on special needs, attachments became available such as plows, disc harrows, mower decks, cultivators, spreaders, snowblowers, and more. They have become a necessary utility for farmers, orchards, small construction jobs, and landscaping/maintenance for estates, parks and golf courses. At the forefront of this evolution was the Farmall Cub and John Deere Model L. Then came the Japanese invasion; a new kind of tractor by companies such as Yanmar and Kubota. These four-wheel drive machines were rugged and tough and used a variety of hydraulically powered attachments. American companies like John Deere, International Harvester, and Massey Ferguson built their own their own four-wheel versions. Today’s compact tractors, such as the Kubota BX series, Massey Ferguson’s GC series, and the John Deere 3000, offer an even larger selection of implements for special purposes.

The Spy Who Would Be Tsar Kevin Coogan 2021-08-16 Michal Goleniewski was one of the Cold War’s most important spies but has been overlooked in the vast literature on the intelligence battles between the Western Powers and the Soviet Bloc. Renowned investigative journalist Kevin Coogan reveals Goleniewski’s extraordinary story for the first time in this biography. Goleniewski rose to be a senior officer in the Polish intelligence service, a position which gave him access to both Polish and Russian secrets. Disillusioned with the Soviet Bloc, he made contact with the CIA, sending them letters containing significant intelligence. He then decided to defect and fled to America in 1961 via an elaborate escape plan in Berlin. His revelations led to the exposure of several important Soviet spies in the West including the Portland spy ring in the UK, the MI6 traitor George Blake, and a spy high up in the West German intelligence service. Despite these hugely important contributions to the Cold War, Goleniewski would later be abandoned by the CIA after he made the outrageous claim that he was actually Tsarevich Alexei Nikolaevich of Russia – the last remaining member of the Romanov Russian royal family and therefore entitled to the lost treasures of the Tsar. Goleniewski’s increasingly fantastical claims led to him becoming embroiled in a bizarre demi-monde of Russian exiles, anti-communist fanatics, right-wing extremists and chivalric orders with deep historical roots in America’s racist and antisemitic underground. This fascinating and revelatory biography will be of interest to students and researchers of the Cold War, intelligence history and right-wing extremism as well as general readers with an interest in these intriguing subjects.

King of the Norfolk Poachers, The: His Life and Times Stuart Gibbard 2020-05-12 The little grey Fergie is Britain’s best-loved tractor, the light user-friendly machine that finally replaced the horse on farms. This highly illustrated account covers the full history of Harry Ferguson’s tractor products from his pioneering work before the 1930s to the merger with Massey in 1957. The author has had access to fresh archive material and has interviewed many of the surviving men who were associated with Ferguson. The appeal of the Fergie lay in its lightness and utility, and also in the system of mechanized farming of which it was a part. Throughout the book, reference is made to the implements which lay at the heart of the system. Stuart Gibbard has won "Tractor and Machinery" magazine’s award for the best British tractor book five years running.
