Optimizing the Super-turbocharged Aeroengine Julian R. Panting 1998-03-06 Turbprop or turbojet engines are the main means of providing motive power for flight. Any improvements which can be made to these technologies in terms of power or fuel efficiency are significant and important developments. After first setting the scene with a short account of aeroengine development, the book goes on to show how a super-turbocharged aeroengine can be significantly more efficient. A detailed account of the studies into the new design philosophy is given and the numerical results of the computational model of this engine design model are analysed. The unusual design of these piston engine units is theoretically modelled and their mechanical design is discussed in some detail. CONTENTS: Conventional jet engine performance Centrifugal supercharger Emissions Performance at altitude Axial piston engine Gas generator Turbine and high-speed alternator design Optimisation techniques Numerical modelling and results Compound turbocharged engine

Suzuki LT230 & LT250 85-90 Penton Staff 2000-05-24 LT230S Chain Drive (1985-1988), LT-F230G Shaft Drive (1985-1987), LT230G Shaft Drive (1985-1986), LT250S Chain Drive (1989-1990)
